

Dear Hiring Manager,

I am writing to express my enthusiasm for the Software Engineer position at SingleStore. As a Computer Science major at Georgia Institute of Technology, I have developed a strong foundation in operating systems, multithreading, and server architectures, which aligns with the skills needed for this role. I am particularly drawn to SingleStore's innovative work in real-time data applications and the opportunity to work in a fast-paced, collaborative environment where engineers are empowered to own their projects end-to-end.

During my internship at Barclays, I gained significant experience working in a production environment, where I developed scalable solutions for real-time data collection and management. My hands-on experience with languages like C++, SQL, and Python allowed me to design and implement solutions that are reliable and efficient, which I believe is critical to success at SingleStore. Furthermore, my exposure to collaborative cross-functional teams during my projects has helped me gain a broader understanding of how technical solutions align with business objectives, a key aspect of the role at SingleStore.

What excites me most about this position is the opportunity to work with cutting-edge technologies, such as LLM and vector indexing, while contributing to improvements in SQL query performance and cluster fault tolerance. I am eager to apply my strong programming skills in C++ and my passion for building highly reliable software to make meaningful contributions to your team. I am also looking forward to learning from the expertise of SingleStore engineers to further expedite my professional development.

Thank you for considering my application. I look forward to the opportunity to discuss how my skills and experience can contribute to SingleStore's mission of delivering real-time data experiences.

Sincerely,
Aniketh Avula
